**ABSTRACT:** This article discusses effective and easy ways to teach English to non-English speaking professionals. It also gives a brief overview of the importance of the English language in various fields.

**KEYWORDS:** opportunity, strength, weaknesses, solution, treatment process.

Sometimes we hear that different people regret not learning a foreign language in their lifetime. If they have the opportunity to learn a foreign language, they often talk about learning English. But they also say that it is difficult to learn English while working. Let us find a solution to this problem by clarifying it.

First of all, we need to be able to study their field at least a little bit. The reason is that they have to use English in their field. For example, doctors can study based on their field. That is, the equipment they use in the treatment process can be even more useful if they know the English names of the drugs. They also use English at various international conferences. So we can teach them. Whether we like it or not, in order for a person to do something, he must first think of the benefits. If we can absorb the benefits properly, the learning process will be easier.

Secondly, you need to teach general English. Round-up, Head away, Essential words, Grammar way, Oxford word skills and others are the best books in the list of useful books to teach and learn. These books provide a variety of explanations and exercises to reinforce the topics on a daily basis. I think it's convenient for the teacher as well. The audio of the books can also be used in the process of explaining the topic.

Most of the foreign language textbooks taught to schoolchildren and students are based on someone's doctoral dissertation. Even doctoral degrees in the technical (exact) sciences are such that this is already happening in the humanities. Take a topic like English. There are many concepts: 12 verb tenses, passive voice, cut, and so on. It can take a long time to study them diligently.

But it would be even easier to study these topics from the perspective of the field. For example, as I mentioned above, a topic that interests doctors in learning English is the words that doctors use in their daily work. Words like "heart," "lung," and "kidney" can come to mind for a surgeon. Therefore, when you start to learn English grammar, you should definitely use the above words in the process of composing sentences.

In the absence of language practice, they do not have the skill to add an English phrase from words in practice, which is a serious obstacle in the way of further reading.

Avoid complexity as you begin teaching students English as a second language. Start with texts that feature basic sentence structure, word order and verb tenses, with few irregular verbs. Use simple vocabulary and do not progress to more complex rules of grammar until the students grasp the basics. ESL Gold recommends moving from basic sentence structure to sentences with simple verbs but subordinate phrases and articles, then to more complex verbs, clauses and hypotheticals

Language teaching has its challenges. Most of the time, it is a foreign language that the learner can't pick up from his/her surroundings, and you should teach patiently and systematically so that the students become confident and can read, write and speak the language effortlessly.

The English language is the language of the world, and English teachers have changed their methods of delivery over the years to suit the present scenario. In this article, I will be discussing specific popular and efficient ways of teaching the English language, which fulfills the demand of modern learners.

This method of teaching English, also known as the direct method, seems to be a response to the Grammar translation technique. In this process, the teacher who is aiming to teach English as a second language, asks the learner to think in English so that they can communicate in English.

The technique aims at building a connection between thought and expression. It required the teacher to strictly prohibit the student from using his/her native language. The learner is supposed to perfectly express himself/herself in English, with proper accent and usage of grammatical skills.

This method of teaching English is used in modern times and is useful in teaching to communicate in English. As the student thinks and talks in English in real-life situations, they learn the language accurately, and there is no rote learning or translation. This might take some time, but whatever is learned has a long term effect on our memory. The more pictures, diagrams, PowerPoint slideshows and videos you can use to connect concepts to words, the better the students will do.

To sum up, we can find different methods of teaching English using the literature, but it is necessary to use them and try them out in practice.
