Abstract

In accordance with the trends of innovative development in the field of education in the world, based on the role of physical education science in human life and the uniqueness of its teaching, the interest in national values in future physical education teachers should be internal and external. On the basis of giving priority to (external) motives, special importance is attached to the development of pedagogical mechanisms that create the opportunity to freely choose the ways of developing pedagogical tolerance by means of reflection, self-activation, and innovative technologies.

Key words: internal and external education, self-activation, innovative technologies, pedagogical tolerance, physical education

Introduction

Sports can unite people of different nationalities. Sports activity requires fighting for results in any case. Aggression in competitions (aggression), unfairness of judges, anger, discrimination, overcoming strong pressure, tolerance in students, young athletes, the best human qualities: justice, kindness, empathy in physical education teacher is evaluated by the level of development of pedagogical tolerance.

Improvement of the mechanism of development of pedagogical tolerance in future physical education teachers on the basis of prioritizing the assimilation of national values as the main means of ethical and humanitarian education in the world, ensuring the harmony of personal and cultural experience is gaining relevance.

Materials and Methods

One of the important conditions for the development of modern civilization is to not

discriminate against a representative of a foreign ethnic group based on his or her appearance and appearance, and not to look for flaws in his or her color, but to consider his or her origin and lineage when communicating with a representative of a foreign religion and foreign culture for various reasons. Regardless, it is considered to be equally respectful to him. From this point of view, the development of mechanisms for the development of pedagogical tolerance in future physical education teachers, the determination of criteria, norms and principles of their pedagogical tolerance, the principles of moral and humanitarian education to this problem It remains an objective necessity to research from a scientific and practical point of view based on the approach directed to the activity of the individual.

Today, in the science of pedagogy, the anthropological approach, that is, scientific approaches that focus on the human factor, occupy an important place. In this way, the connection of national belonging and nationality with the socio-cultural concept requires the study of the issue of preparing students for intercultural communication.

In the modern world, physical education and sports, a healthy lifestyle, a socio-cultural phenomenon, become a unifying force, making a great contribution to the development of a strong state and a healthy society. Previously, the main goal of teacher training was its technological growth, now this goal is directed to the development of the individual, and this is manifested as the result of activities such as self-organization, development and generalization of personal experience. is dying. From this point of view, "pedagogical tolerance" is seen as a category determined by the level of professional training, individual skills and experience of the pedagogue.

Results and Discussion

The concept of innovative activity is innovation, with concepts such as the innovation process closely related. Hence these concepts innovative without commenting on the content it is impossible to understand the content of the activity.

Innovation is a specific area of activity technology in or in production, form

and methods, a new approach to problem solving innovation or application of a new technological process, to achieve more success than before the end result known to lead to- is. So, innovative technologies the main basis - the teacher and the learners are guaranteed from the specified purpose in order to achieve the result in cooperation is to design the educational process from religion. Innovations in the education system today it is recommended to classify as follows:

- depending on the direction of activity (pedagogical in process, management);

- to the description of the introduced changes according to (radical, modified, combined);
- according to the scale of changes (local, modular, systematic);
- according to the source of origin (this team internal or external for).

The goal of innovation is spent from getting the most out of money or effort consists of Others are self-explanatory unlike news that will be in-innovation is managed and controlled constitutes the mechanism of changes.

Innovating physical education teachers Pedagogical technology in preparing for increase in the need to create logos, pe- student in the pedagogic (education, upbringing) process designed to manage activities Competence of physical education classes organic with orientation to personal education is carried out in dependence. All of the innovative activities of the teacher the main activity that determines success it is the professional and methodical skill of the person means quality reconstruction.

Innovative activities of teachers preparation is carried out in three stages:

- application of innovation in pedagogical activity-teacher activity in the period before analysis;
- active formation of innovative activity niche period analysis;
- innovation has been introduced into the pedagogical process analysis of the activity in the period after the event to do

It is known that the characteristics and qualities of a person is formed in the course of activity and is the result of the activity. At the same time innovativeness in teachers constant need for independence and independent reading it is necessary to inculcate the psychology of feeling riyat.

Because innovation is better for a person than glory more fun. The innovation of the physical education teacher tion activity - creative approach, creative activity, technological and innovation methodological training, new thinking, is manifested in the culture of behavior.

News in the period of innovative activity, innovation, literally to the educational process will be absorbed. Therefore, in the educational system introducing innovations into the pedagogical process is carried out in several stages:

- analysis of the existing pedagogical problem to do;
- design of the intended educational system to get rid of
- changes in the pedagogical process and planning events, organizing them make and supervise.

Innovating physical education teachers The purpose of training for the activity of the Chi's desire for innovation, on his own independent work skills and competence formation, modern pedagogical technology guides, using interactive methods, curricular and extracurricular activities from improving transfer skills consists of Innovative activity - scientific research, creation of developments, experimental work or other scientific and technical achievements new technological using process or a new improved product is to create. The original goal of innovative activity muni is actually the formation of a new technology and its result as an innovation the resulting invention to the project, the project aimed at turning into technology is an activity.

Conclusion

In short, the future is physical education teacher to innovative activities perform the following tasks in preparation means to increase:

- 1) national idea, national values Physical education lessons related concepts
- 2) to absorb;
- 3) to carry out education and upbringing harmoniously, young people not only physically, but also spiritually, mature as a morally mature person effective pedagogical measures for conveying- define;
- 4) healthy creativity in educational institutions environment creation, education and upbringing process advanced innovative, pedagogical and information technology teaching by introducing technologies raising fate to a new level;
- 5) young people's outlook, thinking, improve observational skills release.
