### **ABSTRACT**

Today, in the era of globalization, there is a steady trend of growth of economic factors to ensure economic security. In determining most of the formation of relations between states, not only the military potential of the state is important, but also the economic and military-economic potential of the country, the value of gross domestic and national product and other economic indicators. The growing trend in the development of cooperation in the field of public procurement in the work to ensure the logistical support of States in improving their defense capabilities is the main incentive for expanding research work in this area.

**Keywords:** public procurement, military economy, economic security, military budget.

**INTRODUCTION.** Today in era of global development, many countries around the world need modern, fast-moving Armed Forces to protect their independence, sovereignty and borders from their internal and external enemies. Countries need a strong economic system and modern military equipment-technologies in the formation of their Armed Forces.

In the New Uzbekistan development strategy for 2022-2026, one of the priorities is to further strengthen the defense potential of our country and develop our Armed Forces. Based on this strategy, to carry out the operational management of our Armed Forces, it is necessary to make our national army modern accurate in the provision of weapons and military equipment it is necessary to make decisions that provide for those who take action. It is especially important to keep the security, defense and law enforcement agencies in a state of constant shay to increase their operational and combat capability, to prevent any threats to our Armed Forces. Providing our armed forces with modern weapons and military equipment, in turn, sets the stage for strengthening our state's international prestige, resisting any aggression and being constantly ready economically.

**LITERATURE REVIEW.** Defense is the most important factor in resolving contradictions, conflicts that are taking place on the world arena. Improving the material and technical support of the defense system and ensuring continuity is one of the priorities of the state. The state provides and regulates this task through the mechanism of Public Procurement. In particular, the issues of ensuring economic security were discussed by local scientists D.Gurbanov, A.Kadyrov, E.R.Mahmudov, B.D. Studied by sadibekova. Scientists from the Russian and CIS countries also

conducted research dedicated to building military-economic potential, the development of military industrial complexes. In this direction V.Altukhov, O.Arin, S.Afonsev, A.Dinkin, W.R.Evstigneev, V.Inozemtsev, N.Ivanova, I.S. Koroleva, N.A.Kosolapova, S.I.Kuznetsova, E.G.Kochetova, V.Kollontai, B.N.Makeyeva, M.V.Oreshkina, V.I.Peftieva, V.V.Sokolova, N.A.Simonia, L.A.Friedman, W.G.Horos, E.Y.Khrustaleva, V.I.Tsymbal, V.V.Chernivskaya, M.A.Cheshkova, Y.V.Shishkova, A.V.Shchedrin, A.The elyanovas have made significant contributions to the study of the military sector and economic security.<sup>1</sup>

**DISCUSSION.** It is impossible to achieve the effective use of budgetary funds without the formation of a developed system of Public Procurement. A large part of the state budget funds is spent on providing goods, work, services to the approved needs of budgetary organizations and recipients of funds from the budget. The public procurement system and the issues of ensuring economic security are intertwined and are one of the main factors that determine the continuous development of the state. One of the pressing issues is an in-depth analysis of the rich experiences and achievements of developed countries in this direction, as well as the development of the most effective ways to use them. Analyzing the experience of developed countries, their achievements in the field of Public Procurement were also analyzed. The main factor is the presence of such developments as the digitization of public procurement, the organization of public control, the program of Public Procurement. Taking into account the fact that the role of the military economy in ensuring national security in the world community is growing, it will be necessary to take into account a number of factors in the organization of the public procurement system. In particular, it is considered to increase the production of high-tech and high-income military products by foreign countries, international companies and power structures, to meet their military-economic needs in the specified volume and in the situation, within the deadlines determined by military planning.

The main goal of effective organization of public procurement is to achieve the purchase of goods (work, service) at an optimal price and high quality for the needs of budgetary organizations, recipients of funds from budgetary and non-budgetary funds, as well as corporate customers. In this direction, the formation of scientific knowledge on the essence, organization process and mechanism of Public Procurement, procurement procedures, general requirements for public procurement, existing problems in improving public procurement, as well as the study of areas for their elimination is also important. Currently, structural changes in our economy, in particular the increase in prices for food, electricity, petroleum products and first-class products necessary for budgetary organizations, indicate that the sphere of public procurement is a truly important system. Indeed, the economic readiness of the state for defense-implemented in the country it is characterized by military-economic activities and the readiness of the economy for mobilization.

At the heart of the changes on the reform of the system of public procurement are the formation of the state budget and the more effective use of its funds, the Prevention of factors affecting the growth of budget deficits, at the same time ensuring compliance with budgetary discipline and ensuring the socio-economic stability of the country by purposefully and rationally using its funds on Changes in economic processes and relations in the reform of the public procurement system necessitate a radical revision of these issues. Public procurement is one of the important factors in the formation of favorable conditions for the sustainable development of the national economy and ensuring the flow of investment, forming the main part of the expenses that government bodies (organization, institution, ministries) make for the implementation of their function. State procurement is considered an important tool for the effective distribution of investment potential and the creation of favorable conditions for the development of strategically important sectors, conducting scientific research and involving their results in production processes. Therefore, the

problems associated with the organization of public procurement are always relevant and require the implementation of continuous and continuous measures aimed at improving the state procurement system in all states.

Indeed, in the field of Public Procurement, a low level of theoretical knowledge and practical skills is also one of the main reasons for the resulting shortcomings and violations of the law. In this direction, improving the skills of employees engaged in procurement in organizations is one of the urgent tasks of today. Also, public procurement is an important structural integral part of the economy, not regulated or managed in time, a factor that negatively affects socio-economic processes can lead not only to its military political security, but also to the threat and economic dependence of the state on its economic security.

**RESULTS.** In place of the conclusion, we can say that in today's globally developed time, the interdependence of war, politics and the economy is becoming stronger. The military economy has become a direct participant in the preparation and conduct of war.

The national economy of the state indicates that it must be in every possible way ready for war, economic support for its armed forces. Deep knowledge of the laws inherent in the military economy, the correct use of their mechanism of action, the accounting of the laws affecting the field of military economy greatly contribute to the optimal development of this special part of the economy. The basic principles of military-economic activity, guided consistently, allow you to effectively satisfy the defense capabilities, material and financial needs of the state and provide reliable economic protection of the country's armed protection.

#### **RECOMMENDATIONS AND CONCLUSION.**

The following proposals and recommendations were developed on the effective organization of financial relations of budgetary organizations in the implementation of Public Procurement:

- strengthen the responsibility of the participants in the public procurement process and establish public control over them;
- implementation of the achievements of foreign practice in the broad involvement of business entities in the process of Public Procurement;
- use of the experience of advanced foreign countries such as the United States, Russia, China, Germany on the management of Public Procurement;
- coordination of procurement policy with the goals of the economic policy of the state;
- monitoring the implemented policy in the field of State Procurement, making the assessment available to the general public.

Scientific research work shows that the most effective way to bring the public procurement sector into a transparent system is through public control. The importance of the role of state procurement in strengthening the military potential of the state was also revealed in the foreign experience.

Raising its military-economic potential and strengthening its defense capabilities will contribute to the growth of gross domestic product, the penetration of investments into the country, the high standard of living of the population, ensuring high positive-political stability on a country-wide and world-wide scale.

State procurement has a great influence on the effective organization of production capacities of enterprises of the main branches of the defense industry, as well as on the development of such factors as an increase in the height of the population. In developed countries, the money spent on the defense and military sphere is once again proving how necessary they are.
