Introduction

The following article elaborates observations related to the distant learning in pandemic period, investigating both effective as well as ineffective aspects and theory of online learning in near future. Having started in 2020 and making all the learners get glued to their laptops, computers and phones, Covid 19 has profoundly impacted on students' education worldwide. Remote learning had been already existed before the past quarantine period, conversely, its both merits and merits should be admitted. While beneficial side of it is believed to be safe as well as effective that improves ones studying skill, low not only self- regulation- poor time assessment but also health related issues are insisted to be downside of such education. Having experienced all benefits and problems of remote learning, more and more students would prefer online studying, for which it is more likely to be future of education, playing crucial role in educational system as a reformation of dace to face studying.

- ✓ Online education before and during Covid 19.
- ✓ Advantageous sides of online education.
- ✓ Problems of inline education can be noticed.
- ✓ The role of online education in the future.

Online education before and during Covid 19.

In 2020, COVID 19 pandemic situation made all study establishments close their campuses for students and migrate to virtual mode of studying. Yet, it is true that online learning was not only existed during the quarantine but also before it. Before the pandemic circumstance, solely the few educational institutions were introducing both virtual and traditional mode of education. Despite the fact more and more study establishments such as schools, universities were engaged in a new type of studying, very few numbers of adopters and enthusiasts as well as visioners were forward to give a try. EdTick(2020). Such mode of studying was helpful for learners who are living abroad and don't have access to study overseas, also, for those who likes to just give shot and testing the effectiveness as well as convenience of it. As for the virtual schooling in Pandemic situation, it gave a rise for study establishments to shut all across the globe, having remained 1.2 billion learners were out of the classroom worldwide which got them adapt a new type of learning. Even thought there are states at different points in their COVID 19 infection rates, nowadays 1,2 billion

children in 186 countries influenced by school closures globally Cathy Li (2020). More and more online platforms were created in order to prioritize both stable and fruitful as well as convenient environment for students. Not only Zoom but also Google Meet allowed learners to join online classes from any corner of the globe via them. Lockee (2021)

Advantageous sides of online education.

E- learning might seem to be difficult either boring or ineffective, however, some learners find it more efficient and it was indeed impressive during COVID 19. In the period of crisis, in person mode of learning was unsafe and it was unrealistic. Online training was the only way to provide safe a safe and fruitful replacement to classroom. Taking courses online could maintain the protection of not only students but also family members from infection and taking risks. American Safety Council (2021). Convenience, furthermore, is another merit, which paves the way for students to get educated in any time they desire as it was impossible to get educated any extra classes in the time and a place they wish. Studying at home in the comfort zone either in bedroom or in the kitchen – anywhere students desire with the access to the good internet connection lets to take a advantage of no face to face education. American Safety Council (2021) Distant learning last but not least, is the cost effective way to be educated which Is the other benefit. In such a risky period there is no need to commute from one destination to another one. This way learners can save their money, eliminating extra outlays daily such as fare, lunch, books, and etc. As an illustration, according to the UNC, The University of North Carolina managed to save \$5,000,000 in 2010 involving students to study online, rather than classroom- based schooling. These saving were the result of no need for physical lecture halls, that were used to be rather costly. E-student Organization (2021).

Problems of online education can be noticed.

Even though merits of distant learning are a lot, demerits start to arise, similarly. Poor self-motivation as well as time management skills are believed to be major disadvantages. Scarcity of self- motivation is one of the chief reasons why students are not succeeded in completing online courses. In traditional way of studies, there are loads of factors that can push students to attain their academic goals suchlike, face to face communication activities, peer review, and strict schedules that can prevent students from failure. Nonetheless, in many cases, there is nobody for learners to constantly push to study, gain knowledge, urge as well as regulate them to academically perform well toward their learning aims. E- learning Organization (March 21, 2020). Moreover, making parents to concern about, online education causes more and more screen times. Majority parents are worried about health related issues of children spending their time in front of and staring at screen so many hours a day. It is true that due to being glued to a screen, it is easy to get eye related issue, rather, eye deficiency. Also, sedentary lifestyle in one place all day long can deteriorate students' body structure, like, back pain or unproper development of backbone. E- learning Industry (2011-2021). Finally, owing to the fact that, distant learning is completely done trough- tech – devices such as computer, laptop or evenmobile phones, technological issues may happen which become a reason to complete academic courses on time. It is obligatory for students to possess modern types of computers with which it is attainable to use Microsoft Word Document, Zoom, and Google that are handy, yet, rather costly to get. As in quarantine period majority of population – people were banned to work and even go to outside, such a expensive requirement was problematic for those who have struggled with monetary issues. Ann Trent (Seattle)

Why online learning is future education?

Even though some people still hesitate choosing online learning over traditional education, nowadays majority universities at the way that they are already using tech devices even after COVID19 to maintain learning efficiency and durability. To illustrate, different articles, reading materials are posted online and students are involved to utilize some relevant sources so that enhance their understanding capabilities. Most study establishments have introduced e- library

which allow students to obtain online version of any book, helping them by reducing their time and cost simultaneously. (Online Business School). Many experts state online education to be the future of education. As technology is increasingly getting accessible, soaring number of students will be able to obtain the approach to any kind of knowledge that can enormously ameliorate their career wellbeing, and probably even the world as a whole. Online education is on the increase, nowadays. According to a recent poll, 46% of graduates would have preferred to take online credits as a part of their degree, while others – more learners that ever opting for hybrid courses which unite distance learning as well as face to face learning methods. Therefore, lots of students are convinced with flexibility of e- learning and associate their studies with work or individual activities. Ashley Murphy (Keystone Online Education). Hence, the development of technology paves the way for online education will go on being replacement and improvement for traditional education.
